

Build from the map, not a blank table.

DeptDB gives every department the governed tables and lightweight apps they need — built on shared, trusted data instead of yet another rogue spreadsheet. No-code, owned and audited, in the Microsoft tenant you already own.

- No-code tables
- Governed by default
- Live in days

No-code tables
Compose tables and apps without IT — on data that's already trusted.

Governed by default
One owner, scoped permissions and a full audit trail on every table.

Shared, not copied
Build on shared models, not re-keyed spreadsheets. One source, many apps.

HOW TEAMS BUILD

From blank sheet to trusted app

Guided

1

 **Connect**
Start from trusted shared models.

01

2

 **Build**
Compose tables and apps, no code.

02

3

 **Govern**
Ownership, permissions and audit.

03

4

 **Share**
Right access, across departments.

04

5

 **Scale**
Promote what works business-wide.

05

THE PROBLEM

Spreadsheets run the business

- Critical work lives in spreadsheets nobody owns.
- The same data is re-keyed differently in every team.
- No permissions, no audit, no single source.
- IT can't build fast enough; shadow tools fill the gap.
- Sensitive data sprawls across drives and inboxes.

THE PLATFORM

DeptDB turns shared data into apps

Connected systems
